Profile

Mature student software developer currently studying for my BEng (Hons) in Software Engineering at Sheffield Hallam University, I initially spent 2 years at Sheffield Hallam University studying Cyber Security and Computer Networks prior to Covid resulting in a career/education gap, in May 2023 I joined the Northcoders Software Dev Bootcamp where I developed skills and software practices with a focus on full-stack web development.

Technical Skills

Languages: JavaScript, TypeScript, C#/.NET, Python, SQL

Testing: Test Driven Development (TDD), Jest, NUnit, Swagger, Postman/Insomnia

Back-end: PostgreSQL, MySQL, SQLite, Node w/ Express, ASP.NET, Entity Framework, Flask, RESTful API

Front-end: HTML CSS, Tailwind CSS, React, React Native, VueJS, WinForms

Hosting/CI: GitHub Actions, Docker

Environments: Linux (Ubuntu), WSL, VS Code, Visual Studio, Jetbrains Rider

Soft skills: Version control with Git, pair programming, technical communications, documentation, Software Development Lifecycle (SDL), Agile Scrum and Kanban, Continuous Integration / Continuous Deployment (CI/CD)

- IT technical skills including maintaining and installing computer hardware directly, installation and maintenance of software and proficiency with software packages such as troubleshooting support software and the adobe CC suite.

Professional Experience

Trainee Software Developer, Northcoders Software Dev Bootcamp May 2023 to Aug 2023

- Award winning 13-week software development bootcamp teaching Full-Stack development with a focus on PERN stack and methodologies via project-based learning.
- Back-end skills demonstrated by a RESTful news API made with NodeJS, Express, PostgreSQL and Jest. This API was built and documented with error handling using express middleware hosted with on-demand-windup service. Live Project | GitHub Repo
- Front-end skills demonstrated by a responsive mobile-first news web-app built using HTML, CSS and React. This app integrates with a RESTful API allowing users to post and modify data such as ratings and comments. Live Project | GitHub Repo
- Team development skills demonstrated by an independent team project using kanban and scrum methods with specifications involving outreach into new technologies to develop a cross-platform mobile app using React Native with Expo where I was primarily responsible for testing and developing geolocation functionality using Google Maps and displaying marked locations with data received from the backend team as well as designing native forms to enable other frontend team members to implement handling and auth functionality. FE Repo | BE Repo

Library Front Desk, Wath Public Library (Work Placement) Dec 2017 to Dec 2017

- Working with the library database system to manage outbound and incoming inventory and reservations

- Providing first point of contact customer service and IT technical support escalating to manager where necessary

Product line worker, Vortex Clothing Co Ltd (Work Placement) Dec 2015 to Dec 2015

- Operation of various graphics application machinery and ensuring workplace health and safety
- Preparation of graphics transferred from digital to physical format for machinery
- Stocking and maintenance of bespoke graphics equipment for regular customers and large orders
- End of line quality assurance and distribution logistics

Education & Qualifications

- Sheffield Hallam University – BEng (Hons) Software Engineering 2025 – Ongoing
  1st year completed to a level of 1st grade
- Sheffield Hallam University – Cyber Security and Computer Networks 2018 – 2020
- Dearne Valley College, Manvers - BTEC Level 3 Extended Diploma ICT (DMM) 2018
- Netherwood ALC, Wombwell - 6 GCSE´s and 1 BTEC including English, Maths and Science at grades C 2015

Projects

- **ProjectR** – A desktop bug tracker application built in WinForms including data visualization, custom forms, database integration and integration tests, features including creating projects, issues, changes and adding media to issues, live data viewing and custom solutions for fullscreen media viewing and screen navigation. The application was built using WinForms (C#), SQLite, Entity Framework, NUnit and NSubstitute. Repo
- **Elanco Tick Sighting Visualiser** – A data visualization platform built for Elanco as a client for the Software Projects module at Sheffield Hallam. A full-stack application built using NextJS with D3, DrizzleORM and MySQL as part of a 4-person team to create a platform to digest and display data on Tick species sightings across the UK as part of public health information and livestock protection efforts according to client requirements involving geospatial data viz and correction logic for supplied dataset errors. Repo
- **ElDewrito Voting JSON Builder** – A desktop app tool for ED Server hosts to quickly and easily create the required server files, includes mod support, local storage, accessibility and personalization features. Built with: React, TailwindCSS, TypeScript, ElectronJS. Repo

Hobbies / Interests

- Experimenting with new technologies and developing trends to exercise and develop problem solving skills in a dynamic and challenging environment while learning new software languages.
- Competitive powerlifting as part of the SHU Lifting Club representing myself and the university at IPF affiliated competitions collaborating with my coach and clubmates as part of a team.
